Rev. 1.4 2023-02-23

ITEM	CONTENTS	UNIT
LCD Type	TFT/Transmissive/Normally Black/IPS	/
Size	3.5	Inch
Viewing Direction	Free	/
Outside Dimensions (W x H x D)	76.90 x 63.90 x 12.25	mm
Active Area (W x H)	70.08 x 52.56	mm
Pixel Pitch (W x H)	0.219 x 0.219	mm
Resolution	320 (RGB) x 240	/
Brightness	800	cd/m²
Color Depth	16.7 M	/
Pixel Arrangement	RGB Vertical Stripe	/
Driver IC of Board	BT817Q	/
Interface	SPI/QSPI	/
QSPI Flash Memory size	256	Mb
Host Connector	RiBUS, ZIF 20 pin, 0.5mm pitch,	
	down-side contact	/
With/Without Touch	With Projected Capacitive Touch Panel	/
CTP Driver	ILI2132A	/
Supply Voltage for Module	3.3	V
Supply Voltage for Backlight	5.0 (TYP.)	V
Audio amplifier	Build in class-D 1.5W audio amplifier	/
Weight	69	g

Note 1. RoHS3 compliant

Note 2. LCM weight tolerance: ± 5%.

1. REVISION RECORD

REV NO.	REV DATE	CONTENTS	REMARK S
1.0	2021-07-27	Initial Release	
1.1	2021-12-06	Add the accessory link of Riverdi louder speaker: RVA-SPK1.5W-C150, which is matched with Riverdi all EVE4 series displays.	
1.2	2022-04-13	Correction on figure of simplified audio circuit design from R4, 1K resistor to R4, 100K resistor. R4 100K is the actual resistor value on PCB.	
1.3	2022-11-30	 Update the backlight electrical parameters Add more detailed info like QSPI flash memory size, Audio amplifier etc. Drawing update with adding grounding tape and dimensions overhaul 	
1.4	2023-02-23	The recommended PWM backlight frequency (REG_PWM HZ) ranges from 10 kHZ to 100kHZ

Note 1. Animated pictures are displayed on the screen and there is no QSPI communication during the measurement of TYP and MAX values.

TYP value is measured when the audio is off.

MAX value is measured when the audio is on, and volume is set to maximum.

Riverdi loudspeaker RVA-SPK1.5W-C150 is applied during the measurement.

Note 3. To control the backlight dimming, please refer to subchapter 10.4.

MIN BL is when REG_PWM_DUTY = 1

50% BL is when REG_PWM_DUTY = 64

100% BL is when REG_PWM_DUTY = 128

Note 1. Contrast Ratio (CR) is defined mathematically as below, for more information see Figure 2.

Contrast Ratio = $\frac{\text{Average Surface Luminance with all white pixels (P1, P2, P3, P4, P5)}}{\text{Average Surface Luminance with all black pixels (P1, P2, P3, P4, P5)}}$

Note 2. Surface luminance is the LCD surface from the surface with all pixels displaying white. For more information see Figure 2.

Lv = Average Surface Luminance with all white pixels (P1, P2, P3, P4, P5)

Note 3. The uniformity in surface luminance δ WHITE is determined by measuring luminance at each test position 1 through 5, and then dividing the minimum luminance of

5 points luminance by maximum luminance of 5 points luminance. For more information see Figure 2.

 $\delta \text{ WHITE } = \frac{\text{Minimum Surface Luminance with all white pixels (P1, P2, P3, P4, P5)}}{\text{Maximum Surface Luminance with all white pixels (P1, P2, P3, P4, P5)}}$

Note 4. Response time is the time required for the display to transition from white to black (Rise Time, Tr) and from black to white (Decay Time, Tf). For additional information see Figure 1. The test equipment is BM-7A.

Note 5. CIE (x, y) chromaticity, the x, y value is determined by measuring luminance at each test position 1 through 5, and then calculating the average value.

Note 6. For TFT module, viewing angle is the angle at which the contrast ratio is greater 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to LCD surface. For more information see Figure 3.

Note 7. Viewing angle is measured at the center point of the LCD by CONOSCOPE (ergo-80). For response time testing, the testing data is based on BM-7A. Instruments for Contrast Ratio, Surface Luminance, Luminance Uniformity, Chromaticity the test data is based on SR-3A.

10. BT817Q CONTROLLER SPECIFICATION

BT817Q or EVE4 (Embedded Video Engine 4) simplifies the system architecture for advanced human machine interfaces (HMIs) by providing functionality for display, audio, and touch as well as an object-oriented architecture approach that extends from display creation to the rendering of the graphics.

10.1 Serial host interface

Figure 5. SPI single/dual interface connection

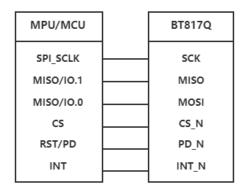

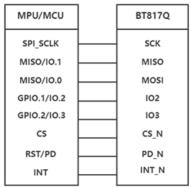

Figure 6. QSPI interface connection

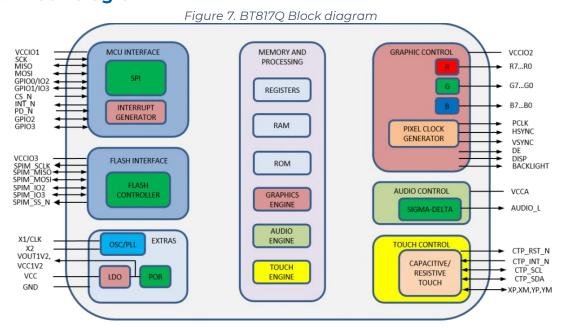

SPI Interface – the SPI slave interface operates up to 30MHz

Only SPI mode 0 is supported. The SPI interface is selected by default.

QSPI Interface – the QSPI slave interface operates up to 30MHz. Only SPI mode 0 is supported. The QSPI can be configured as a SPI slave in SINGLE, DUAL or QUAD channel modes.

By default, the SPI slave operates in the SINGLE channel mode with MOSI as input from the master and MISO as output to the master. DUAL and QUAD channel modes can be configured through the SPI slave itself. To change the channel modes, write to register REG_SPI_WIDTH.

10.4 Backlight driver block diagram

Backlight enable signal is internally connected to BT817Q backlight control pin. This pin is controlled by two BT817Q's registers. **REG_PWM_HZ** specifies the PWM output frequency. The recommend PWM backlight frequency ranges from 10kHZ to 100kHZ. **REG_PWM_DUTY** specifies the duty cycle.

Refer to BT817Q datasheet for more information.

Figure 9. Backlight driver block diagram

The LED backlight driver used in this module does not burst the LED current. Therefore, it does not generate audible noises on the output capacitor. It is equipped with soft start subsystem, which increases LED lifetime, as LED current peaks are reduced significantly.

11. 256Mb NOR FLASH MEMORY

The Riverdi EVE4 3.5" series modules are built with a 256Mb NOR flash memory chip. Graphics assets such as fonts, audio, and images can be stored in the flash memory. Up to 410 full resolution (320 * 240 pixels, JPG) images can be stored. If you need to change the memory size, please contact: contact@riverdi.com

There is an additional port P3 for programming the flash memory directly from an external source. This port is designed to be used during production if the customer wants to order pre-programmed EVE4 boards with graphic content of their own choice.

Cable TC2050-IDC-NL is compatible with P3 programming port.

14. MODULE INITIALIZATION

1. There is no need to set touch calibration matrix (REG_TOUCH_TRANSFORM_A-F registers in BT817Q) as touch panel resolution and orientation are the same as display, so default values in BT817Q are correct.

2. Initialization data, timings and example codes are available on the Riverdi GitHub, at address: https://github.com/riverdi/riverdi-eve

17.LEGAL INFORMATION

CE marking is usually obligatory only for a complete end product. Riverdi display modules are semi-finished goods which are used as inputs to become part of the finished products. Therefore, Riverdi display modules are not CE marked.

Riverdi grants the guarantee for the proper operation of the goods for a period of 12 months from the date of possession of the goods. If in a consequence of this guaranteed execution the customer has received the defects-free item as replacement for the defective item, the effectiveness period of this guarantee shall start anew from the moment the customer receives the defects-free item.
